Professional Summary

Analytical professional with 6+ years at Apple across Fraud Prevention and Strategic Data Solutions. Experienced in demand forecasting, operational analytics, KPI tracking, and cross-functional stakeholder collaboration. Strong background in statistical modelling, time-series analysis, and performance optimisation. Currently completing a Master's in Artificial Intelligence, applying advanced analytics and forecasting techniques to support data-driven planning and operational decision-making.

Core Skills

Demand Forecasting & Time-Series Analysis
Capacity Planning & Workload Forecasting
Inventory & Operational KPI Tracking
Statistical Modelling & Data-Driven Decision Making
Advanced Excel (Pivot Tables, Forecasting Models)
SQL (Large-scale data querying & transformation)
Python (pandas, scikit-learn, XGBoost)
Business Intelligence (Tableau)
Cross-Functional Stakeholder Collaboration
Continuous Process Improvement

Professional Experience

Apple – Strategic Data Solutions

Quality Business Analyst (Fraud – Workforce Optimisation Rotation) Sept 2025 – Feb 2026, Cork

- Selected for competitive analytics rotation within Fraud Operations.
- Built SQL and Tableau dashboards tracking operational KPIs including case inflow, SLA adherence, productivity, and performance metrics.
- Analysed seasonality, demand patterns, and workload variability to support capacity forecasting and resource planning decisions.
- Developed forecasting models to anticipate volume fluctuations and improve operational readiness.
- Automated recurring reporting processes using SQL, Python, and Excel-based tools.
- Presented data-driven insights to leadership, supporting strategic planning and continuous improvement initiatives.

Fraud Prevention Specialist

Apr 2022 – Present, Cork

- Analysed 22,000+ transactions with 99.41% verified accuracy across EMEA and AMR regions.
- Applied quantitative analysis and risk modelling principles to detect patterns and mitigate financial losses.

- Contributed to process optimisation initiatives improving workflow efficiency and case allocation.
- Communicated complex analytics to cross-functional stakeholders in fast-paced operational environments.

AppleCare – Apple

Technical Support Supervisor & Mentor

Oct 2019 – Apr 2022, Cork

- Led high-volume operational teams maintaining 95%+ customer satisfaction.
- Built performance dashboards to monitor service levels and operational metrics.
- Standardised processes to improve efficiency and reduce resolution time.

Education

Master's in Artificial Intelligence (In Progress) 2025–2027
Munster Technological University, Cork

Higher Diploma in Data Analytics 2023–2025
National College of Ireland, Dublin

Professional Diploma in Corporate Fraud Investigation 2023
City Colleges, Dublin

Master's in Osteopathy 2014–2019
IDHEO, Nantes, France

Selected AI & Machine Learning Projects

Healthcare Education LLM System – Retrieval-Augmented Generation (RAG) : Master Final Project

- Designed and implemented a Generative AI application for healthcare education using Retrieval-Augmented Generation (RAG).
- Built vector-based semantic search pipeline integrating embeddings and structured prompt engineering.
- Implemented modular LLM orchestration, conversational memory, and summarisation components.
- Developed evaluation framework assessing accuracy, faithfulness, hallucination detection, and safety calibration.
- Containerised deployment with GPU acceleration for scalable experimentation.

Kaggle House Prices – Advanced Regression & Forecasting Pipeline : Personal Project

github.com/simon-gobin/kaggle-house-xgb

- Built end-to-end machine learning pipeline using XGBoost, CatBoost, and LightGBM with Bayesian optimisation.
- Implemented cross-validation, stacking (OOB meta-models), feature engineering, and regularisation strategies.
- Achieved **Top 1% global ranking** on Kaggle leaderboard.
- Designed GPU-accelerated experimentation framework for reproducible model optimisation.

PISA Educational Data Analysis and Modelling Bachelor : Final Project

github.com/simon-gobin/Pisa_project

- Processed and analysed global PISA education datasets to extract insights on performance patterns.
- Conducted exploratory data analysis and statistical modelling to investigate key predictors of academic outcomes.
- Visualised trends across countries and subgroups using Python (pandas, matplotlib, seaborn).
- Built predictive models comparing performance trajectories and evaluating model accuracy.
- Documented findings with reproducible notebooks and clear result interpretation.
